FSM Brand LeeFee Certified Organic Timothy

FSM Brand LeeFee Certified Organic Timothy is a good choice for certified organic dry hay producers and as a component of moderate to high fiber diets for sheep, horses, and dry cows.

Agronomic & Performance Characteristics

- Intermediate maturity (heading mid-late May)
 - Rapid regrowth
 - Heat, drought and wet tolerant
 - Superior winterhardiness to both ryegrass and tall fescue!
 - Best for stock diets where moderate to high fiber levels are desired
 - Good digestibility with a dNDF of 70-85% depending on stage of harvest and season
- Variety Development: Non-GMO
Seeding Rates: Pasture 30-35#/acre
Haylage 20-25#/acre

FSM Brand LeeFee certified organic timothy is a moderately leafy, long-lived bunch grass well suited for dry hay production, alone or with red clover or branch rooted alfalfa, on moderate to heavy soils under organic production. LeeFee will produce on wet, heavy soils with minimal fertility but can excel given improved fertility and moderate moisture.

LeeFee can generally be successfully sown anytime after the first of August through early spring. Herbicide is not usually needed, except to kill or suppress a sod for no-till planting. Late fall and early spring seedings will generally establish but not be highly productive the first summer. Fertilizer requirements are similar to other cool season grasses, however, a reasonable yield can be harvested in one cutting annually with minimal fertility. LeeFee will normally be ready for harvest during the first or second week of June (either just before or immediately after head emergence). If harvested just as heads emerge with adequate fertility and moisture, a second cutting is possible but is generally significantly less tonnage. LeeFee should not be harvested lower than 3-4 inches under any circumstance! Proper harvest height management and stage of maturity are critical for regrowth, along with temperature and moisture conditions after harvest.

FSM Brand LeeFee Timothy is benefitted by Myco-Seed Treat for enhanced seedling establishment at a rate of 4oz/100#.

Use an Agri-Energy Hay Fertility Program to supply balanced nutrition throughout the growing season, including essential calcium, phosphorus, and potassium.

FSM Brand LeeFee Timothy is certified organic.
