FSM Brand Big Red Certified Organic Crimson Clover

FSM Brand **Big Red Crimson Clover** is a certified organic over-wintering annual variety suited for hay or silage production.

Agronomic & Performance Characteristics

- Rapid establishment
- Roots penetrate up to 36 inches
- Widely adaptive to a variety of soils
- Great winterhardiness
- Requires adequate calcium
- Excellent Soil-building cover crop

Proper Positioning & Management

FSM Brand **Big Red** crimson clover is best suited as a high producing nitrogen-fixing cover crop for short term certified organic rotations of up to 1 year. **Big Red** can be drilled into harvested grain or produce stubble alone or with other summer planted green manure crops (buckwheat, Italian ryegrass, hairy vetch) to increase nitrogen fixation, and bio-mass. As with other crimson clovers, **Big Red** will perform well on a wide range of soils throughout Ohio preferring soils with moderate to good drainage. Seed is untreated; therefore, proper rhizobium inoculation is highly recommended. We recommend **Myco-Seed Treat**. For best results, drill **Big Red** crimson clover at 25-30 pounds per acre no deeper than 1/2 inch into a firm seed bed. Fertilizer requirements for red clover include adequate calcium, phosphorous and potassium. Although additional fertilizer is often not applied to short term forages or plow down crops, our **BioEnhanced Alfalfa Fertility Program** could be used to supply balanced nutrition for maximum yield, forage quality, and mineral availability in stubble hay.

FSM Brand **Big Red Crimson Clover** should be inoculated with **Myco-Seed Treat** at the rate of 4oz/100# before planting.

Use our **BioEnhanced Alfalfa Fertility Program** to supply balanced nutrition throughout the growing season, including, essential calcium, phosphorus, and potassium.

FSM Brand **Big Red Organic Crimson Clover** is certified organic by NICS.
