FSM Brand CA\$H Organic Perennial Ryegrass

FSM Brand CA\$H is a high-yielding, persistent certified organic, tetraploid perennial ryegrass with good disease resistance.

Agronomic & Performance Characteristics

- Establishes within a few weeks of planting
- Roots aggressively in loamy soil
- Prefers soils with moderate to high fertility and adequate (but not excessive) moisture.
- Very good winterhardiness
- Highly digestible, high energy forage.

Proper Positioning & Management of FSM Brand CA\$H Perennial Ryegrass

FSM Brand CA\$H is recommended as a component of a diverse cool-season sward harvested as pasture, green chop or baleage, like our **FSM Brand HQ Organic Pasture Mix**. CA\$H is most successfully established by inoculating with **MycoSeed Treat (MST)** and drilling or broadcasting and rolling in a well fitted seed bed. It will perform well throughout Ohio preferring high fertility soils with at least 3% organic matter. Given adequate moisture and fertility, CA\$H will produce approximately 1 ton of dry matter per every 4 to 6 inches of growth and should be harvested as often as it reaches 6 inches of height. For highest quality forage, harvest should be made before heads emerge. As with other cool-season grasses, CA\$H will respond to balanced fertility and adequate available calcium. We recommend supplementing manure applications with our **BioEnhanced Organic Pasture Fertility Program** to maximize nutrient availability and support maximum growth, health and quality. FSM Brand CA\$H perennial ryegrass is *certified organic by NICS*.

FSM Brand CA\$H perennial ryegrass should be inoculated with **Myco-Seed Treat (MST)** at a rate of 4oz/100# before planting.

Use our **BioEnhanced Organic Pasture Fertility Program** to supply balanced nutrition throughout the growing season, including, essential calcium, phosphorus, and potassium.

FSM Brand CA\$H Organic Perennial Ryegrass is Certified Organic by NICS.
