FSM Brand LeeFee III Organic Timothy

FSM Brand LeeFee III was developed in Europe for improved leafiness, demonstrates excellent winter hardiness, yield and resistance to leaf disease.

Agronomic & Performance Characteristics

- Early to Mid maturity (heads early June)
- Tolerates wet, heavy soils with minimal fertility, but will respond to enhanced fertility levels with adequate soil moisture.
- Excellent leaf disease resistance & winterhardiness

Proper Positioning & Management of FSM Brand LeeFee III Organic Timothy

FSM Brand LeeFee III is well suited for dry hay production, alone or with FSM Brand Prosperity V red clover or FSM Brand 362-ORG alfalfa on moderate to heavy soils under organic production. Seeding rate alone for hay is 10 to 12 pounds per acre; 8 to 10 pounds per acre when seeded with alfalfa, red clover or trefoil. LeeFee III can generally be successfully sown any time after the 1st of August through early spring. Late fall and early spring seedings will generally establish, but not be fully productive the first summer. LeeFee III will normally be ready for harvest during the first week of June (just after head emergence). If harvested just as heads emerge with adequate fertility and moisture, a second summer cutting is possible, but is generally less tonnage than first cutting. As with other cool-season grasses, LeeFee III will respond to balanced fertility and adequate available calcium. We recommend supplementing manure applications with our BioEnhanced Grass Hay Fertility Programs to maximize nutrient availability and support maximum growth, health and quality.

FSM Brand LeeFee III Organic timothy should be inoculated with Myco-Seed Treat (MST) at the rate of 4oz/100# before planting.

Use our BioEnhanced Grass Hay Fertility Program to supply balanced nutrition throughout the growing season, including, essential calcium, phosphorus, and potassium.

FSM Brand LeeFee III is Certified Organic by NICS
