FSM Brand N-Pea Organic Forage Peas

FSM Brand N-Pea has a proven track record for high-protein, high-yield forage and as a tremendous nitrogen fixer when used as a plow down in organic crop production.

Characteristics:

Flower color-	Purple
Height at maturity-	30-36"
Wet soil tolerance-	Very good
Dry soil tolerance-	Good
Heat tolerance-	Very good
Nitrogen fixation-	Excellent
Forage yield-	Excellent

FSM Brand N-Pea forage peas are adapted to most soil-types and perform best when planted as early in the spring as fields are fit to get on. Recommended seeding rate is **100-120 pounds per acre**. Seed should be properly inoculated and drilled 1/2" to 3/4" deep in a clean, firm seed bed. FSM recommends treating **N-Pea seed** with **MycoSeed Treat (MST)** and **N-Dure PV**. Harvest window for forage is at 55-60 days or when the first flowers emerge. When taking down peas ahead of planting corn, either turn fodder completely under and plant immediately or wait 10 to 14 days if peas are disked or rototilled into the soil. Proper microbial inoculation enhances nutrient uptake, plant health and nitrogen-fixation. Peas need adequate available Calcium, Phosphorous and Sulfur to perform well.

FSM Brand N-Pea Forage Peas are Certified Organic by NICS.
