

### • Improved Soil Tilth

Improved biological activity transforms soil particles from a blocky to granular structure. The result is a healthy soil aggregate that grows healthy plants and helps to preserve yield potential.

### • Enhanced Water Management

In **WET** conditions, soils drain quicker due to the increased **LARGE** spaces between the soil particles.

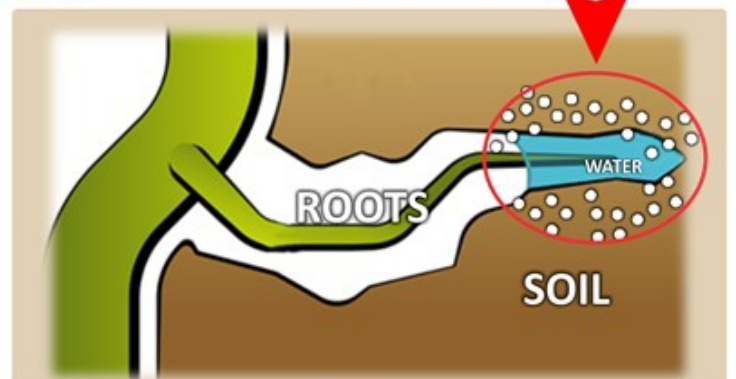

In **DRY** conditions, soils retain more water due to the increased **SMALL** spaces in each soil particle that act like a sponge..

### • Efficient Nutrient Cycling

Biological activity promotes better soil to root tip interaction and improves nutrient movement UP to the plant.

For the Forage Grower, this means Improved Fertilizer Efficiency, Greater Nutrient Density and Enhanced Digestibility

EFFICIENCY Starts **HERE**

# Bio-Enhanced™ Products

Consider our Family of Biological products as a key component in your quality Forage Programs. Improved biological activity in your soil contributes greatly to plant health.

## MST Myco Seed Treat

MST contains 15 different microorganisms, providing a beneficial zone of microbes around the seed to form a symbiotic relationship with the plant's roots.

MVP and Pasture Health

## MVP

Exclusive to AgriEnergy, MVP is the product of choice by growers committed to improving the biological health of their soil.

MT-17 Field Trial

## MT-17

MT-17 is formulated for use with bulk organic inputs such as manure, compost, and green manure to maximize their benefits.

## Residue

Residue accelerates the breakdown of field residue to help recycle nutrients, capture more carbon in the soil, and has been known to reduce the need for purchased inputs.
